

# Project Solicitation and Prioritization

---

State Ten year plan & MPO Long Range Transportation Plan

# Ten Year Plan Guidance From NH DOT

- Adding CON phase to the last two years of the Ten Year Plan
- Target funding for the region is **\$8,055,824**
- **Costs must include inflation at ~~2.8%~~ per year and 10% indirect costs**  
**3.7%**
- All RPCs and DOT will use a common set of project selection criteria
- Projects must undergo engineering/cost review prior to being reviewed by NHDOT. Can submit projects up to budget target +2 for review.
- Once final priorities are set, selected MPO projects will be added to the draft Ten Year Plan as presented
  - Projects must still go through GACIT process

# Project Selection – Feedback from NHDOT Review

- Have received formal project review recommendations from NHDOT
- Estimates are generally low compared to NHDOT perspective
- Requiring an increased inflation rate from 2.8% to 3.7% per year
  - Inflation rate utilized is supposed to be cooperatively developed with MPOs
- High Street project needs additional study to determine an appropriate approach and is not recommended at this time. Staff and TAC concur.

# Project Selection – Applying more Inflation

Draft Rank	Project	Cost Submitted to NHDOT	NHDOT Estimated Cost	Change	
1	Portsmouth Traffic Circle (US1 Bypass)	\$8,979,734	\$12,895,542	+\$3,915,808	53% from project 47% from inflation
2	NH 102 at Blueberry Hill in Raymond	\$813,695	\$2,052,854	+\$1,239,159	72% from project 28% from inflation
3	Ashworth Avenue (NH 1A) in Hampton	\$5,522,045	\$6,904,497	+\$1,382,452	46% from project 54% from inflation
4	Portsmouth Avenue (NH 108) in Stratham	\$2,613,880	\$4,339,146	+\$1,725,266	60% from project 40% from inflation
5	High Street (NH 27) in Hampton	\$2,473,976	Not Ready	????	
<b>Subtotal</b>		<b>\$20,403,330</b>	<b>\$26,192,039</b>		

---

# Project Selection – Recommendation

TAC and Policy consensus was to keep Portsmouth Circle as the Priority

- Based on NHDOT cost estimate, the project is too expensive to be funded with a single cycle of RPC's target funding in the Ten Year Plan.

Instead, RPC recommended the following:

- Engineering Study to update the circa 2000 Portsmouth Circle Feasibility Study (\$1,100,000)
- Construct Hampton Ashworth Avenue bike/pedestrian improvement to compliment work proposed on Ocean Boulevard (\$4,440,000 base cost - \$6,900,000 inflated)
- Raymond Blueberry Hill Road/NH 107 was submitted to HSIP for a Road Safety Audit (RSA)

# RPC Priorities for the Ten Year Plan

- Submitted to NHDOT in March
- Proposed to be added to the Ten Year Plan as follows:

Project		Phase	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034
44225	Portsmouth Circle	PE					\$1,100,000					
44226	Hampton – Ashworth Avenue	PE						\$683,967				
		ROW							\$294,207			
		CON								\$5,916,323		

- New Castle Causeway and NH 1B improvements
- NH 125/South Road Brentwood – Added via Highway Safety Improvement Program

# Ten Year Plan Hearings

- Hampton Beach – August 23, 2023 @ 1:30 PM (Short kick-off meeting with all Executive Councilors)
- Salem High School TV Studio – September 7 @ 7:00 PM
- Kingston Town Hall – September 13 @ 7:00 PM
- Seabrook Community Center – October 12 @ 7:00 PM
- Greenland Central School – October 19 @ 7:00 PM
- Hampstead Town Hall – October 24 @ 7:00 PM
- 15 Minute presentation from NHDOT
- 5 Minute presentation from RPC

# Long Range Transportation Plan Updates

Transportation Advisory Committee Meeting  
8/24/23

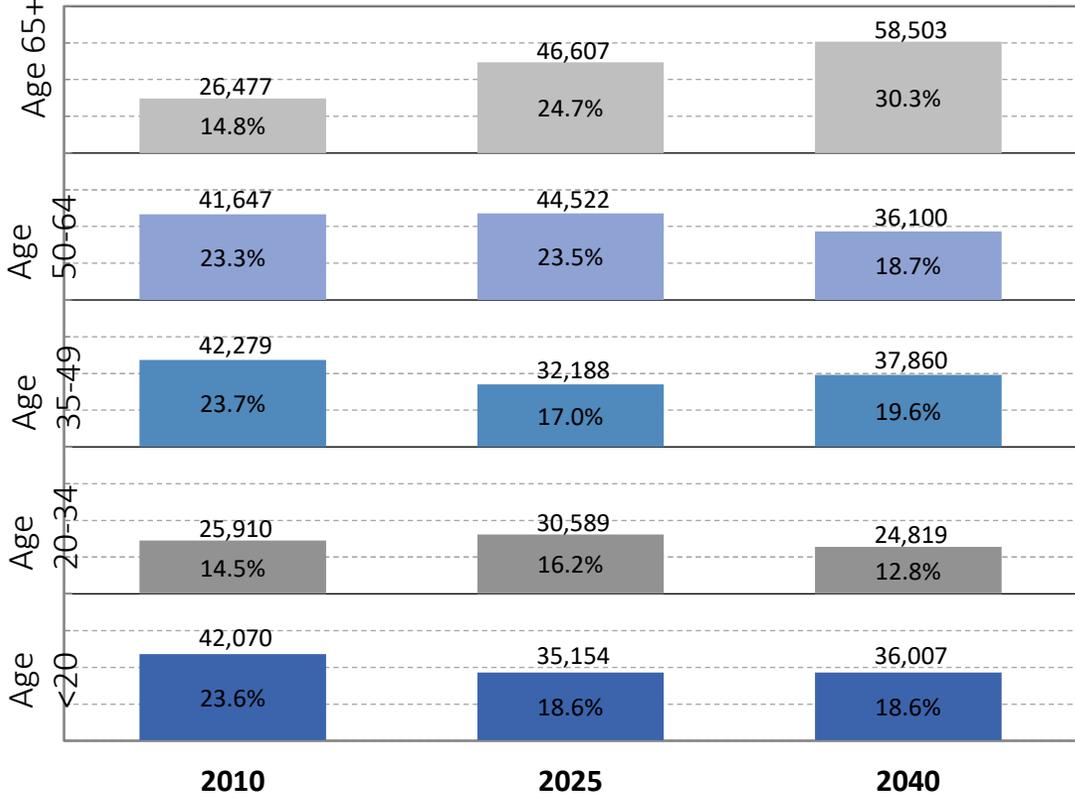

# Quick overview

- **What's new about this version of the Plan:**
  - Continuing themes
  - Document Accessibility
  - Scenario Planning Model
  - Updated public outreach efforts

# Continuing Themes

# Theme: Planning for Changing Demographics

# Theme: Balanced Transportation System

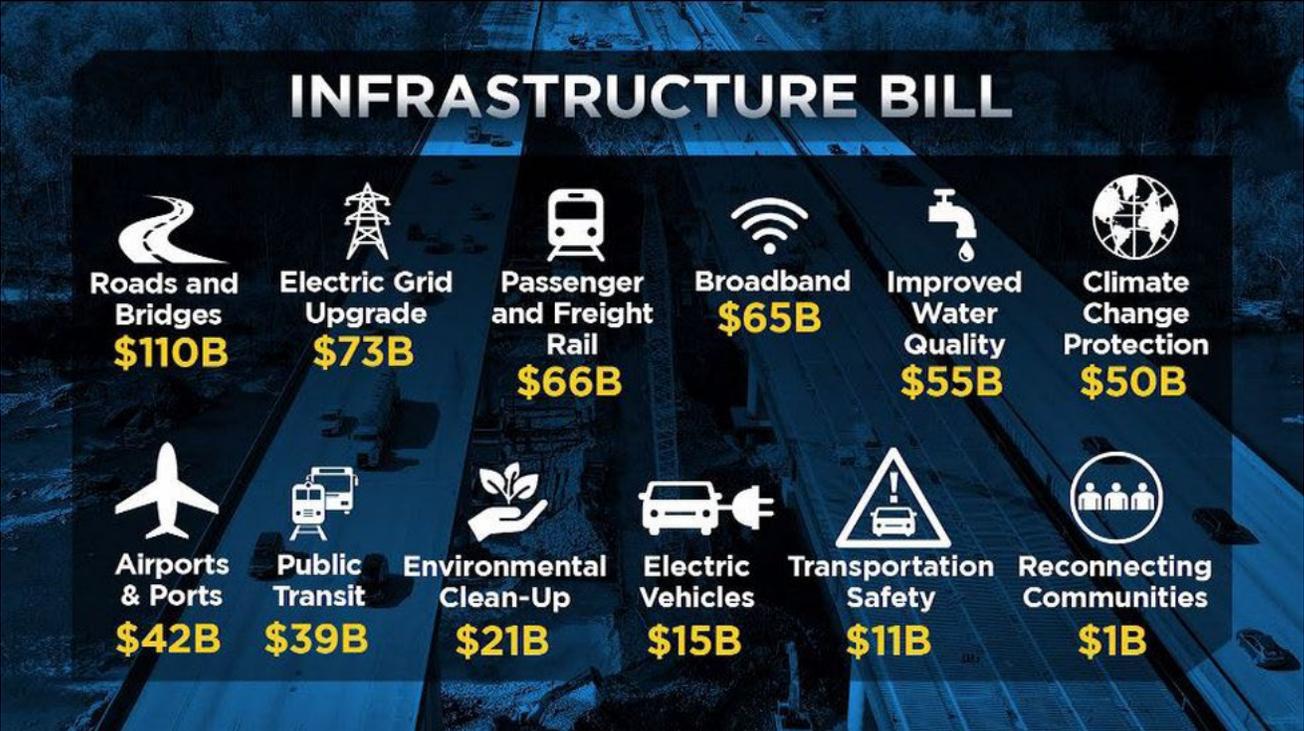

## A Complete Street

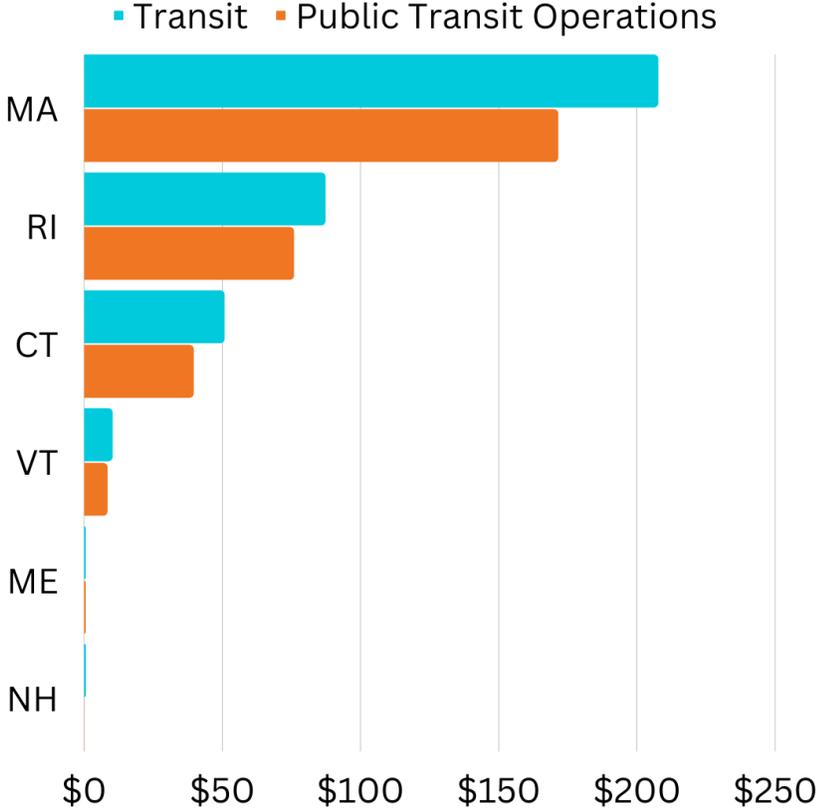

Sidewalks that connect to parks, public transportation, and schools; roads that include designated and protected bike lanes; and streets that accommodate all people, can help us safely be active and improve our quality of life.

People who live in neighborhoods that are safe and offer opportunities for walking, biking, and other physical activity, weigh less and are less likely to have heart disease.

# Theme: Transportation System Funding

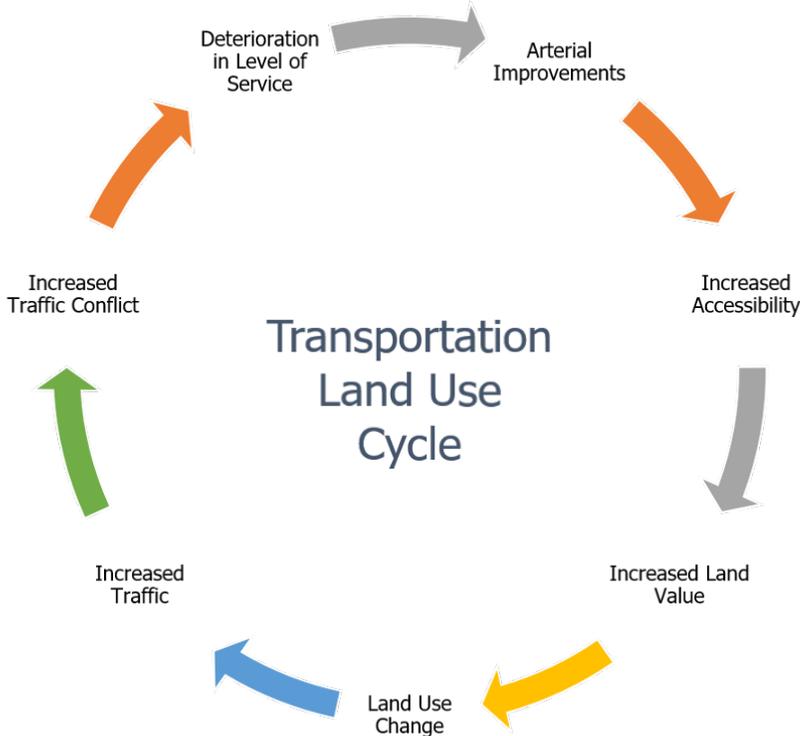

## FY 2010 Per Capita Spending

Source: APTA/AASHTO

# Theme: Land Use Coordination

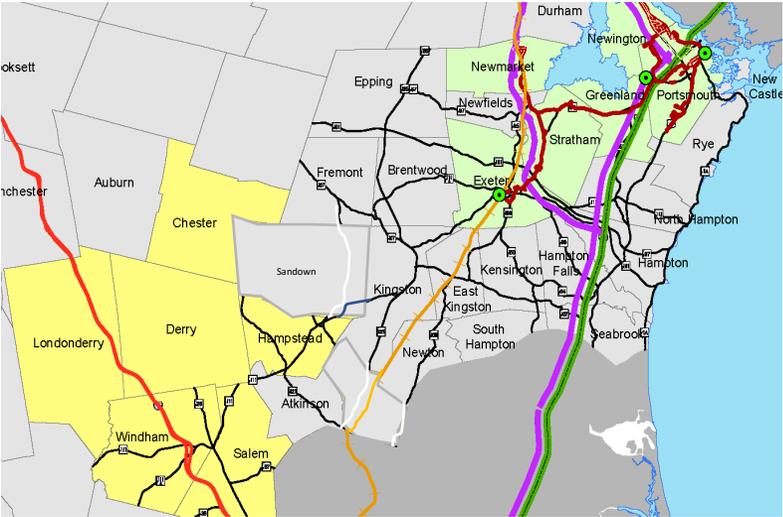

Preventing sprawl and inducing walkability

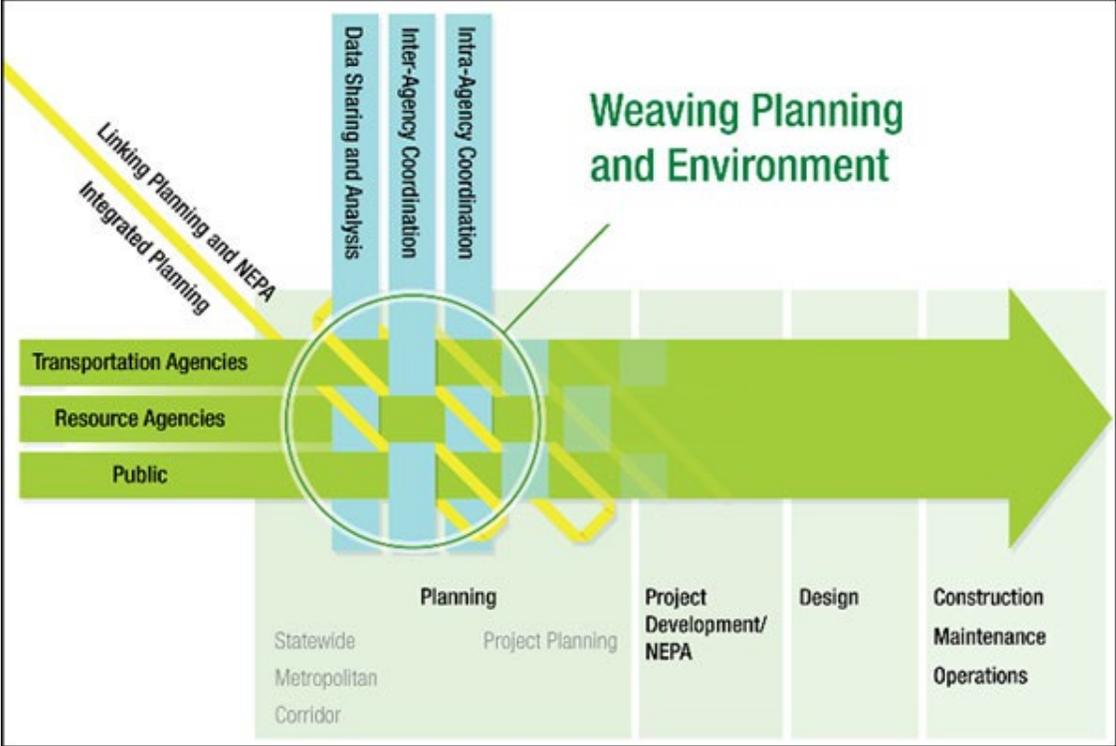

Incorporating RHNA findings

Distributed pattern of development makes transit service difficult to expand

# Theme: Resiliency & Adaptability

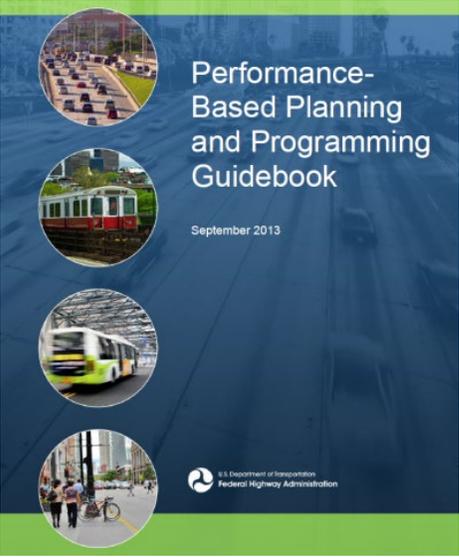

# Theme: Regional Project Selection & Coordination

## Coordinated Project Evaluation Criteria

Criterion	Weight
Congestion	12%
Freight Mobility	4.5%
Alternative Modes	9.2%
Traffic Volume	4.2%
Facility Importance	10.5%
Safety Measures	13.2%
Safety Performance	11.8%
State of Repair	19.9%
Regional Support	14.7%

## MPO Coordination on Performance Measure Development

Rank	Proj#	Location	Facility	Total Cost	Congestion	Freight Mobility	Improves Accessibility	Traffic Volume	Facility Importance	Safety Measures	Safety Performance	Service Life & Current Asset Condition	Regional Support	Total Weighted Score
1	6375001	Plaistow	NH 121A	\$ 900,000	0.5	0.5	0.75	0.12	0.6	1	0.75	0.75	1	0.736
2	6379023	Portsmouth	Maplewood Ave	\$ 582,000	0.5	0.5	0.75	0.14	0.6	0.75	0.75	0.75	1	0.704
3	6147010	Epping	NH 125	\$ 626,400	0.75	0.75	0.25	0.29	0.9	0.25	1	0.75	1	0.701
4	6379007	Portsmouth	Maplewood Ave	\$ 690,000	0.5	0.5	0.25	0.13	0.6	1	0.75	0.75	1	0.691

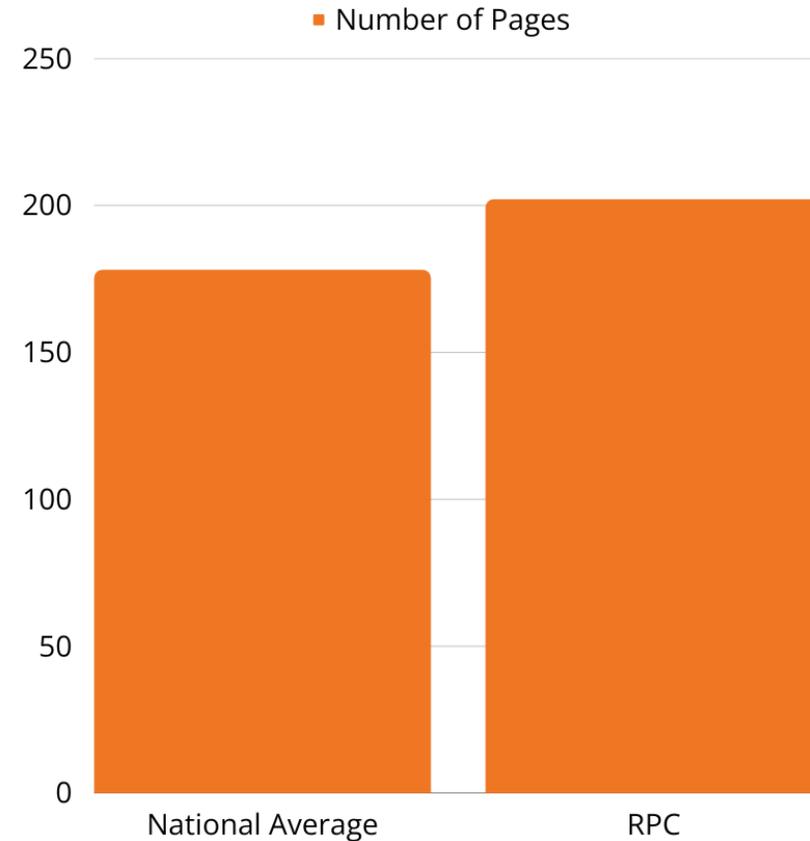

# Document Accessibility

# 1 of 4: Length

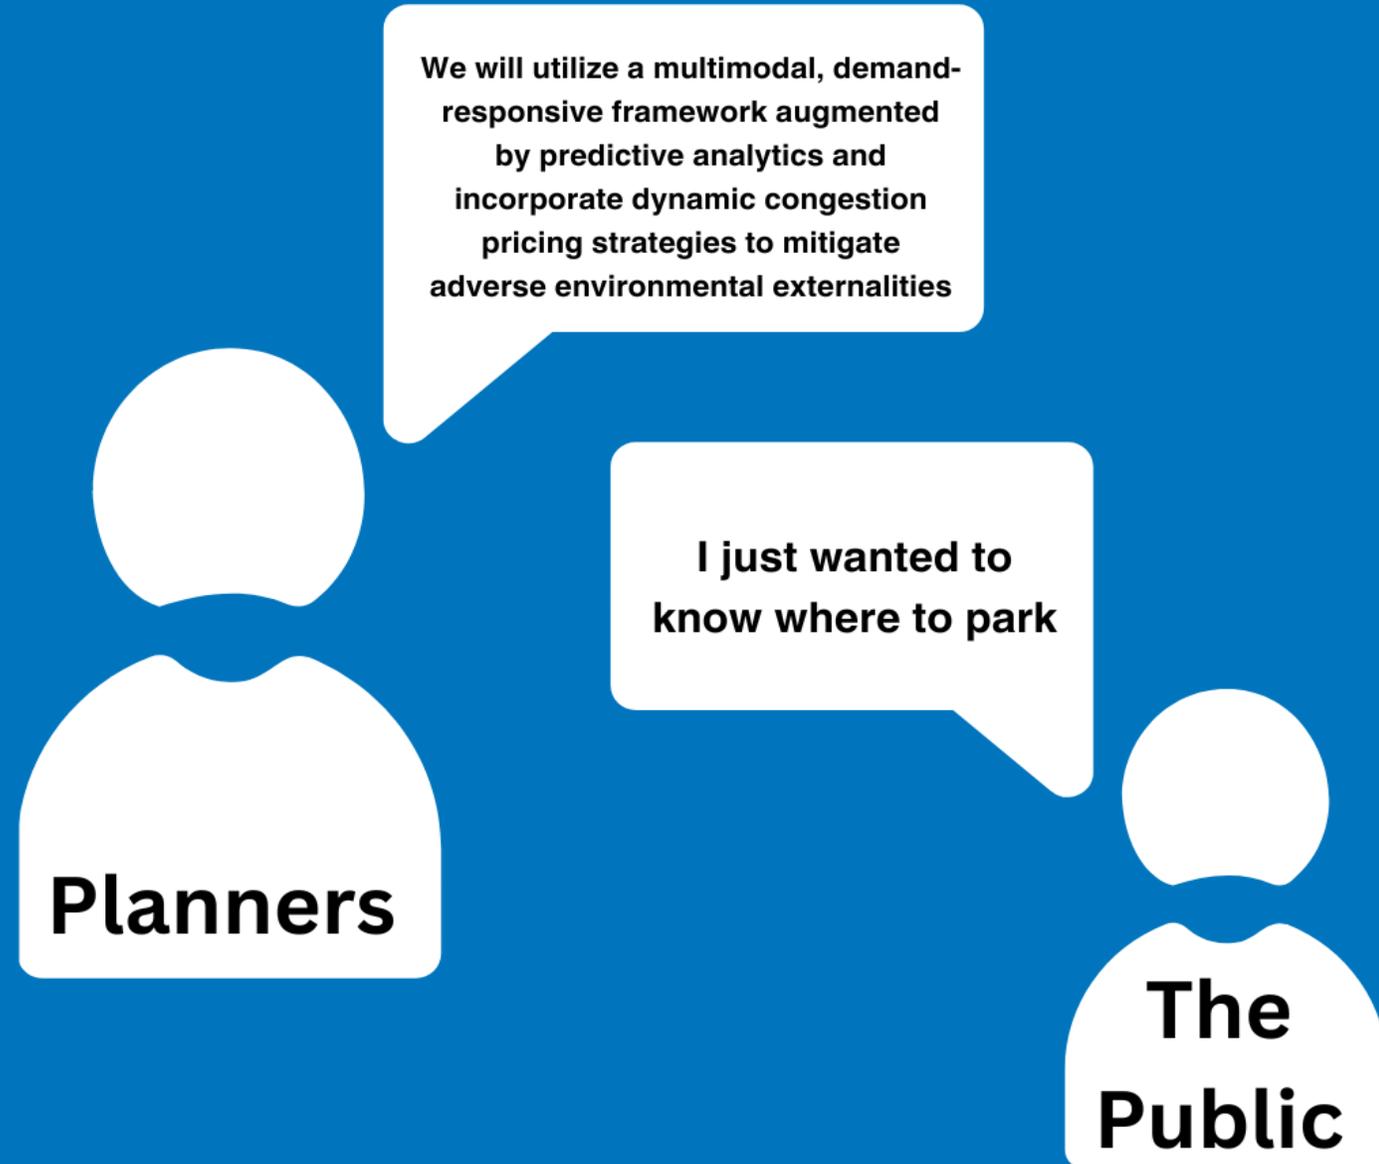

- Objectives
  - Inclusion of essential topics and contextual information
  - Documentation efficiency
  - Use of appendices
- Goals
  - User-friendliness
  - Efficiency in update process
  - Easily referenceable

## L RTP Page Length

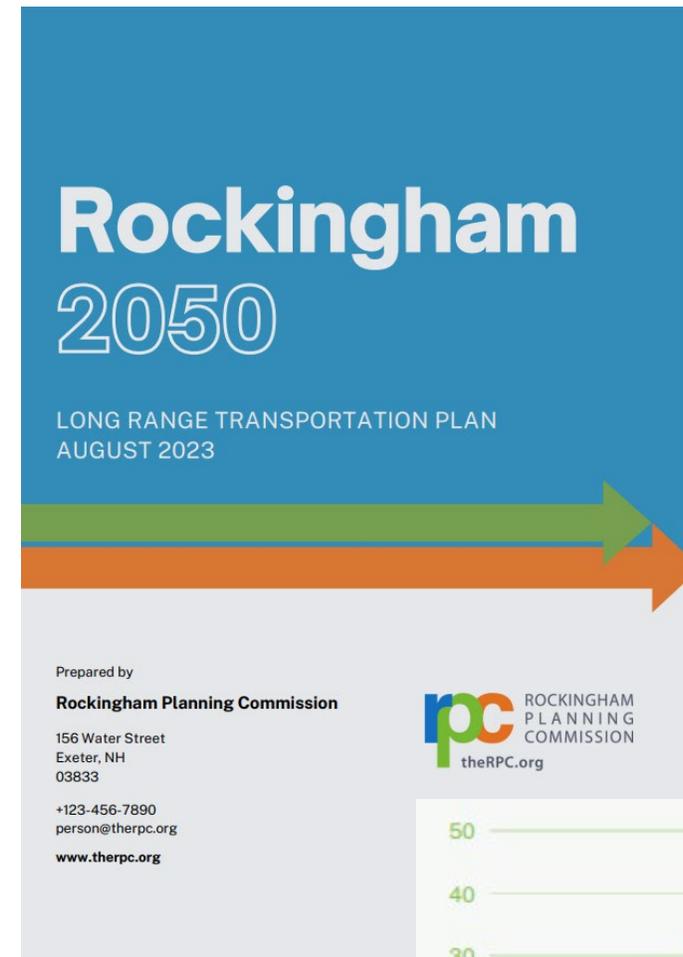

# 2 of 4: Clarity

- Objectives
  - Language reading level
  - Flow of structure
- Goals
  - Make language understandable to all our readers, not just those in the field
  - Update the Plan in a cohesive format that flows in a sensible way

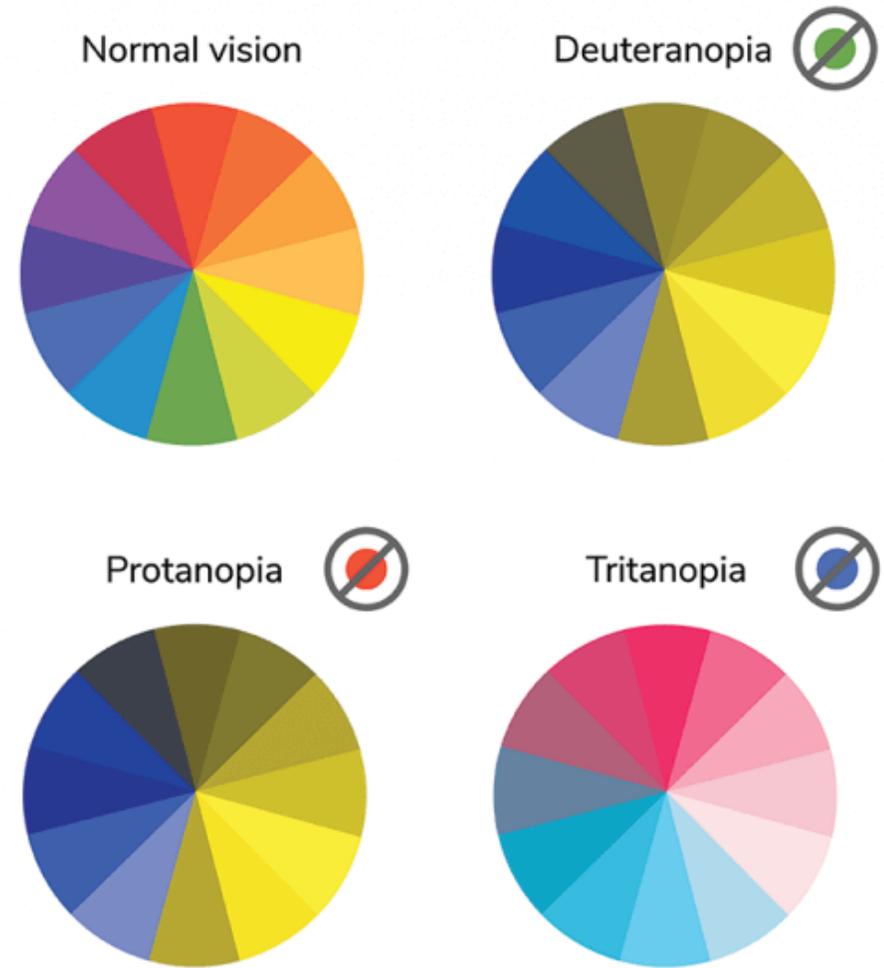

# 3 of 4: Graphics

- Measures
  - Appearance of general layout
  - Effectiveness at communicating information
- Goals
  - Incorporate effective and relevant images, graphs, charts, and other visuals
  - Convey data powerfully and clearly

# 4 of 4: Accessibility!

- Measures
  - Compliance with assistive tech
  - Consideration for readers who are vision-impaired, colorblind, etc.
- Goals
  - Make the Plan accessible to people of all abilities using best practices for document design

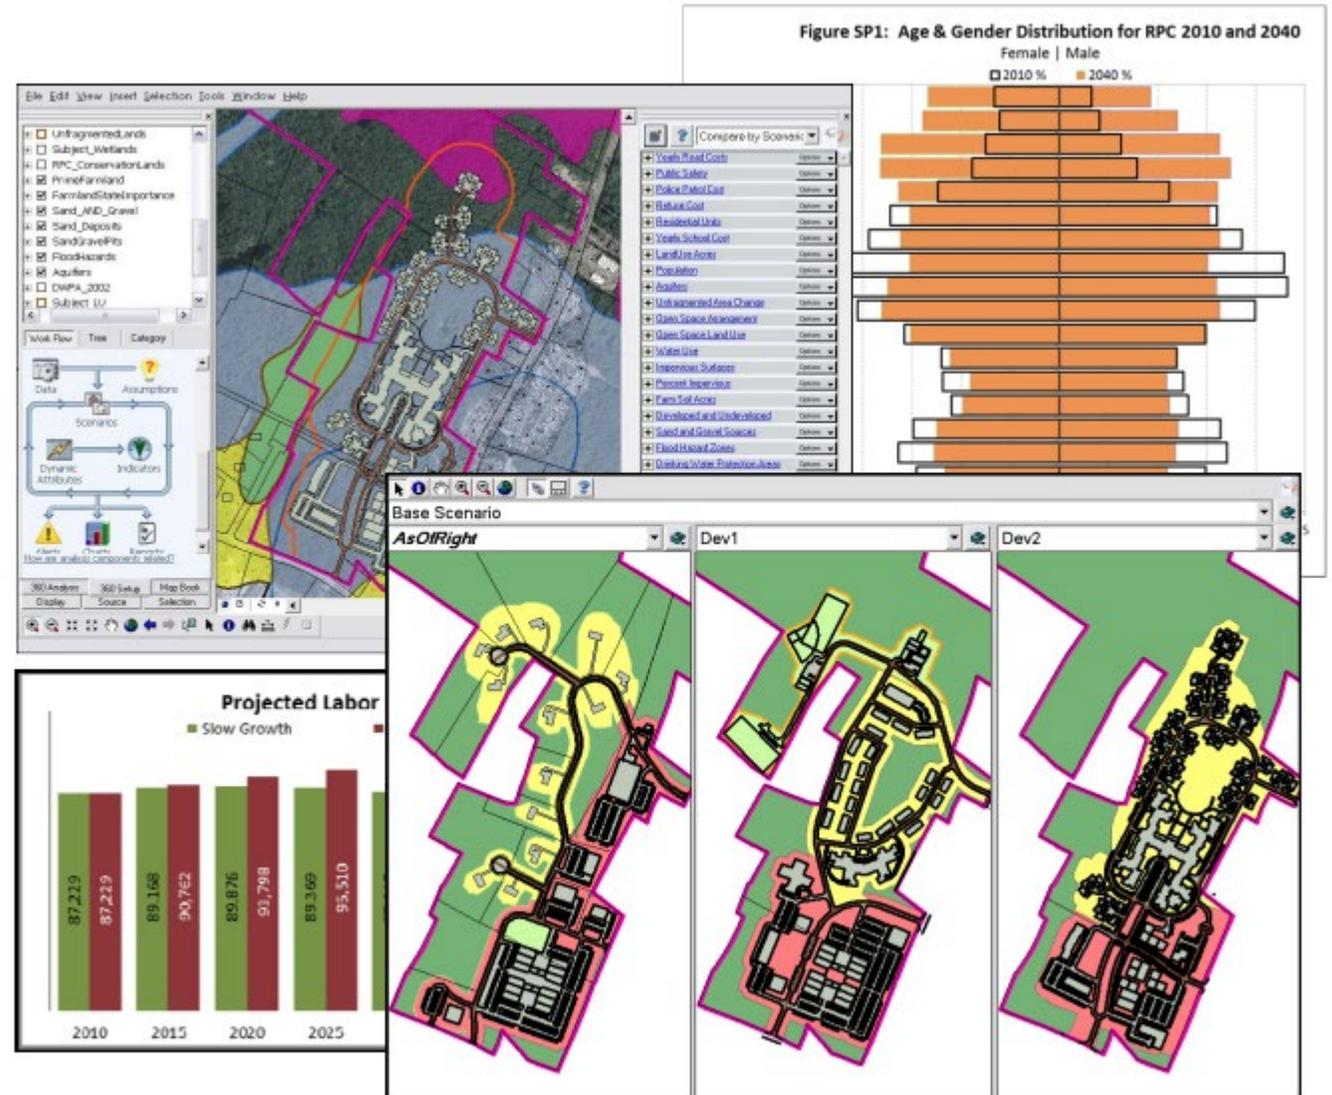

# Scenario Planning

# Scenario Planning

- Potential of shifting new development to employment centers
- Resiliency scenarios
- Early in the process

# Public Outreach

# Survey

- Reaching historically underserved groups
- Identifying transportation barriers
- Shaping the 2050 vision
- Understanding transportation decisions and behaviors

# PublicInput

# Other Outreach Efforts

- Utilizing existing CHAT data
- Focus Groups/Visioning Sessions

# PublicInput

# Comments and Recommendations

- Comments/Questions?

# COAST & UNH Wildcat Transit Stop Accessibility Study

FTA Section 5305e State  
Planning & Research Grant

# Transit Stop Accessibility Study Project Scope

Pedestrian Level  
of Traffic Stress  
Analysis

Connectivity  
Analysis

Outreach &  
Engagement

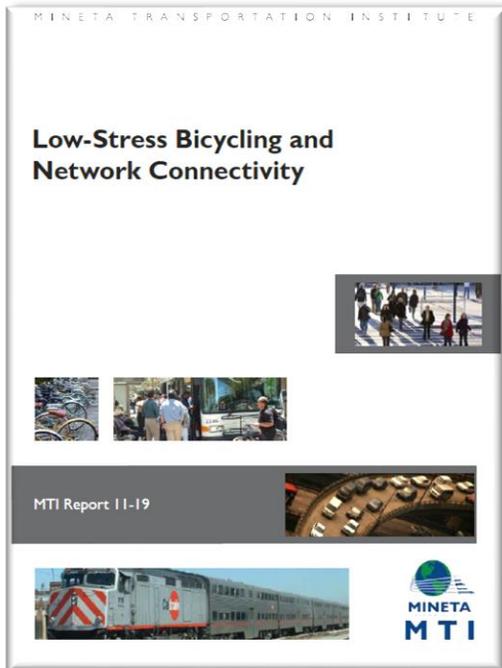

Model  
Ordinance  
Language

# ***TASK 1 - Pedestrian Level of Traffic Stress (LTS) Analysis & Mapping***

- Pedestrian LTS Methodology
- Sidewalk Network Data Development
- PLTS Analysis
- PLTS Mapping

# Level of Traffic Stress (LTS)

Mekuria et al. 2012

**LTS4**

**Exposure Experienced**

**High Stress** suitable for experienced riders with tolerance for speed and traffic

**LTS3**

**Comfortably Confident**

**Moderate Stress** suitable for those who ride regularly

**LTS2**

**Willing But Wary**

**Lower Stress** suitable for adults with some experience

**LTS1**

**Kids & Beginners**

**Lowest Stress** suitable for all riders

# Pedestrian LTS Analysis

## Ped LTS Typical Model Inputs

Posted Speed

Number of Lanes

Traffic Volume (AADT)

Sidewalk Condition & Width

Buffer Type & Width

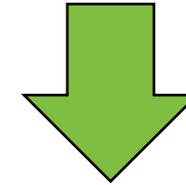

Parking Presence & Width

Illumination

Surrounding Land Use

Crosswalk presence and characteristics

NH Roads GIS Layer (\*)

Additional Data  
Collection

*Left: Arrow shows how the mini map helps to ensure your orientation in active ST where it can get confusing. Right: Full SV screen when the Mini-map is enlarged.*

# Data Development: COAST & UNH Wildcat Transit Route Networks

## RPC Region

155 COAST Stops

32 Wildcat Stops

## SRPC Region

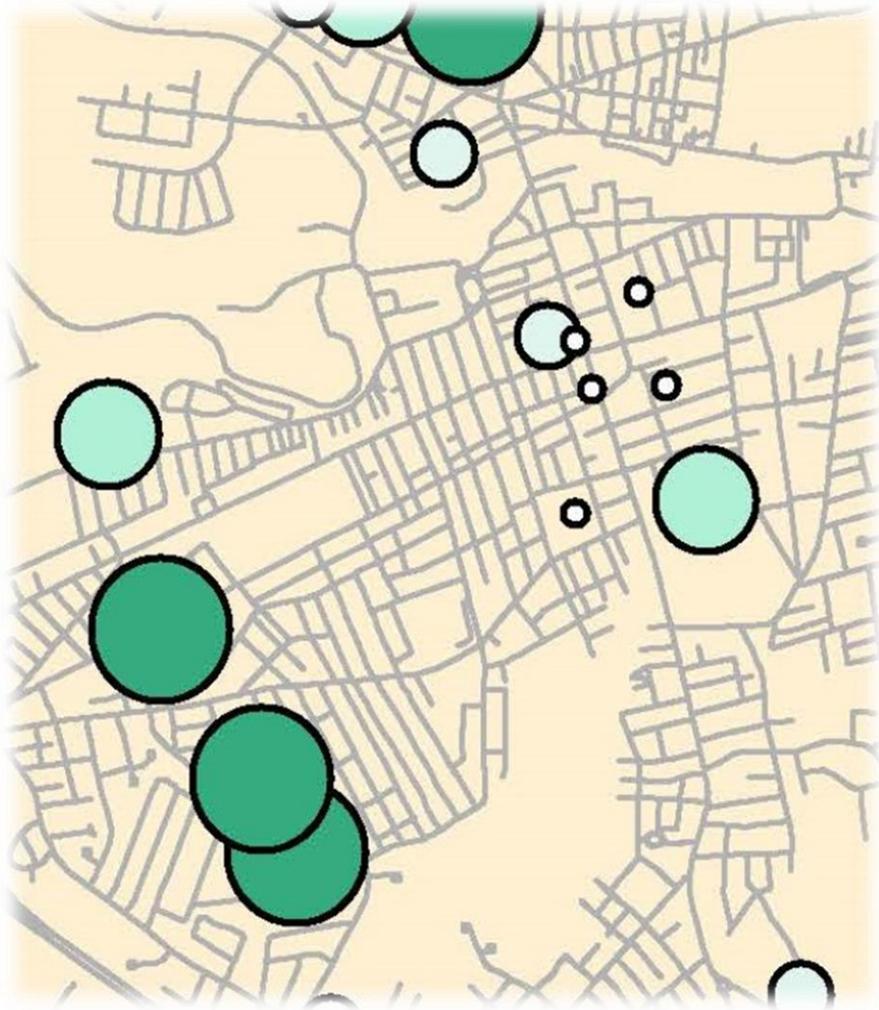

266 COAST Stops

111 Wildcat Stops

## Maine

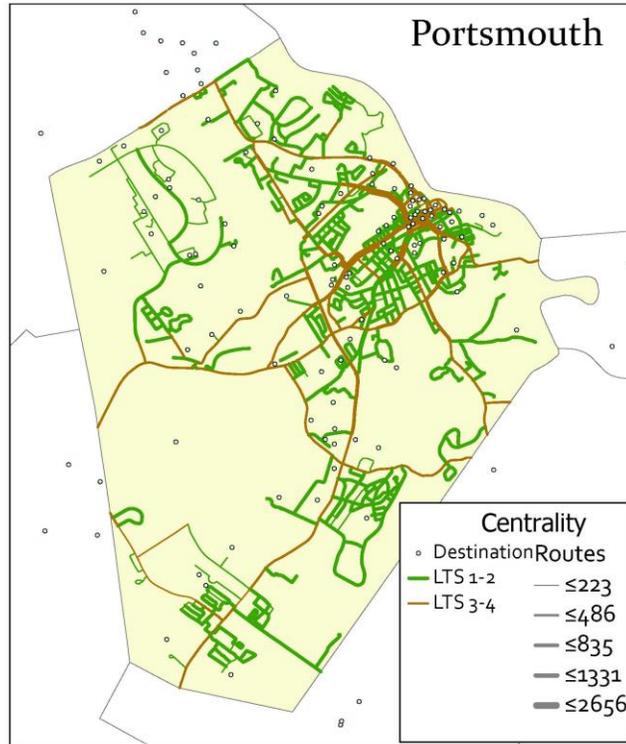

20 COAST Stops

## ***TASK 2 – High Frequency Locations & Connectivity Analysis***

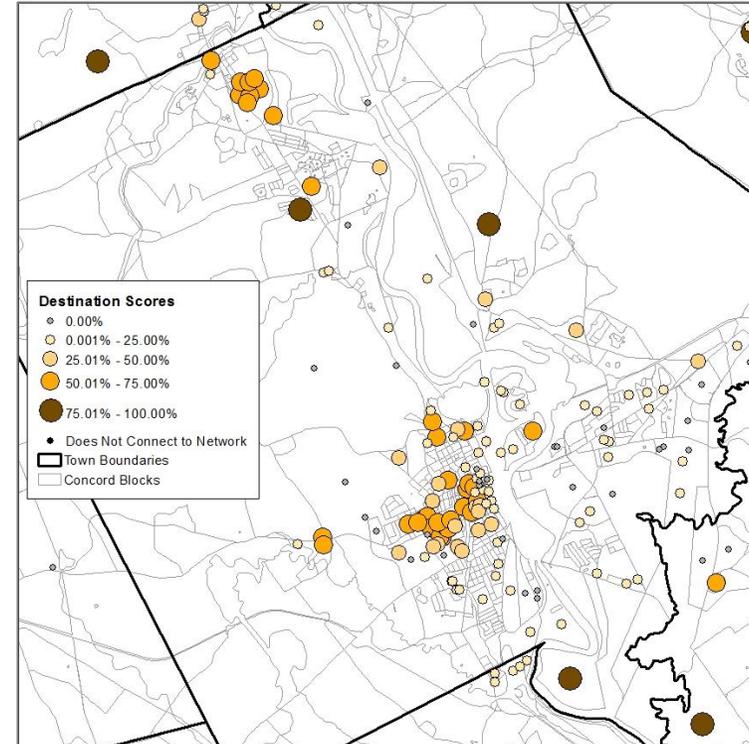

- Heat map high use transit stops
- ADA paratransit location analysis
- Assess connectivity between transit stops, commercial and residential areas
- Gap analysis

# Level of Traffic Stress Connectivity Analysis

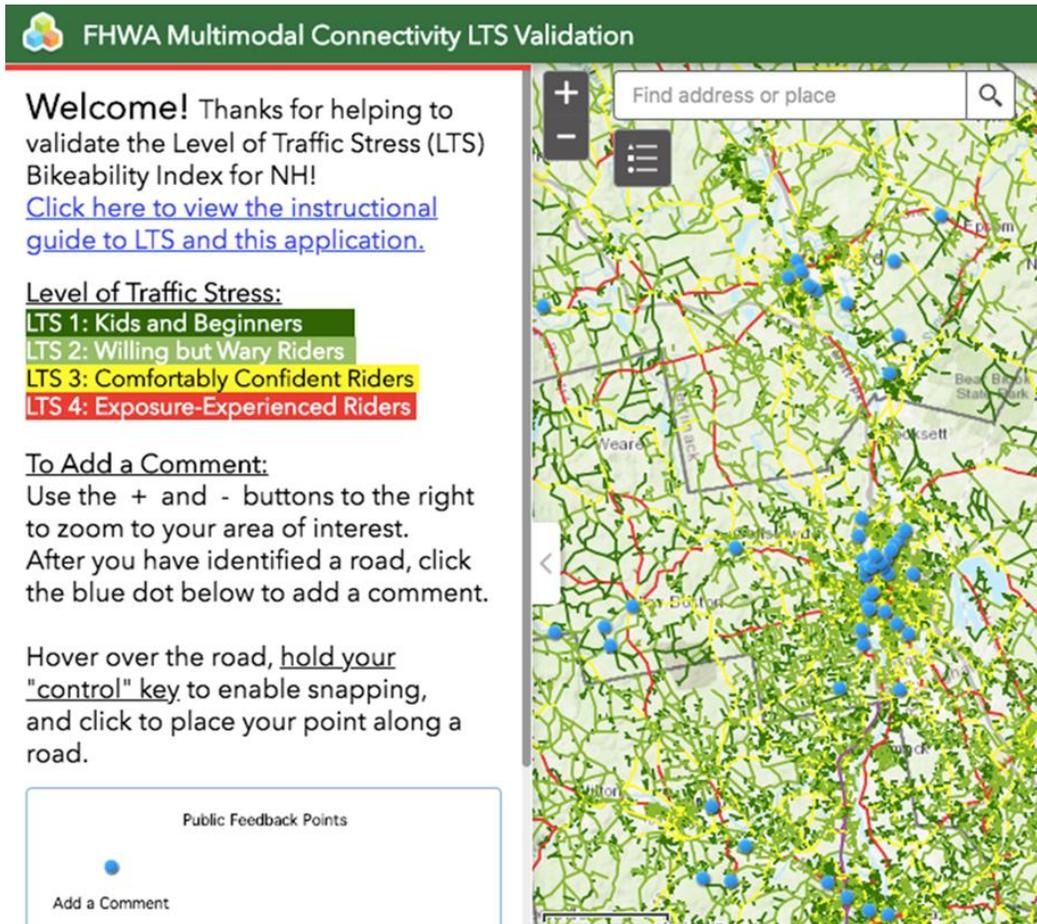

Portsmouth Route  
Centrality

Concord Avg Destination  
Score: 22.4%

# TASK 3 – Outreach & Engagement

The screenshot shows the FHWA Multimodal Connectivity LTS Validation application. The interface includes a search bar at the top with the text "Find address or place" and a magnifying glass icon. Below the search bar is a map of a region with roads color-coded by Level of Traffic Stress (LTS). The map is overlaid with numerous blue dots representing public feedback points. On the left side of the map, there are zoom controls (+ and - buttons) and a menu icon. Below the map, there is a legend for the Level of Traffic Stress categories: LTS 1: Kids and Beginners (green), LTS 2: Willing but Wary Riders (yellow), LTS 3: Comfortably Confident Riders (orange), and LTS 4: Exposure-Experienced Riders (red). At the bottom left, there is a "Public Feedback Points" section with a blue dot icon and the text "Add a Comment".

**FHWA Multimodal Connectivity LTS Validation**

**Welcome!** Thanks for helping to validate the Level of Traffic Stress (LTS) Bikeability Index for NH!  
[Click here to view the instructional guide to LTS and this application.](#)

**Level of Traffic Stress:**  
LTS 1: Kids and Beginners  
LTS 2: Willing but Wary Riders  
LTS 3: Comfortably Confident Riders  
LTS 4: Exposure-Experienced Riders

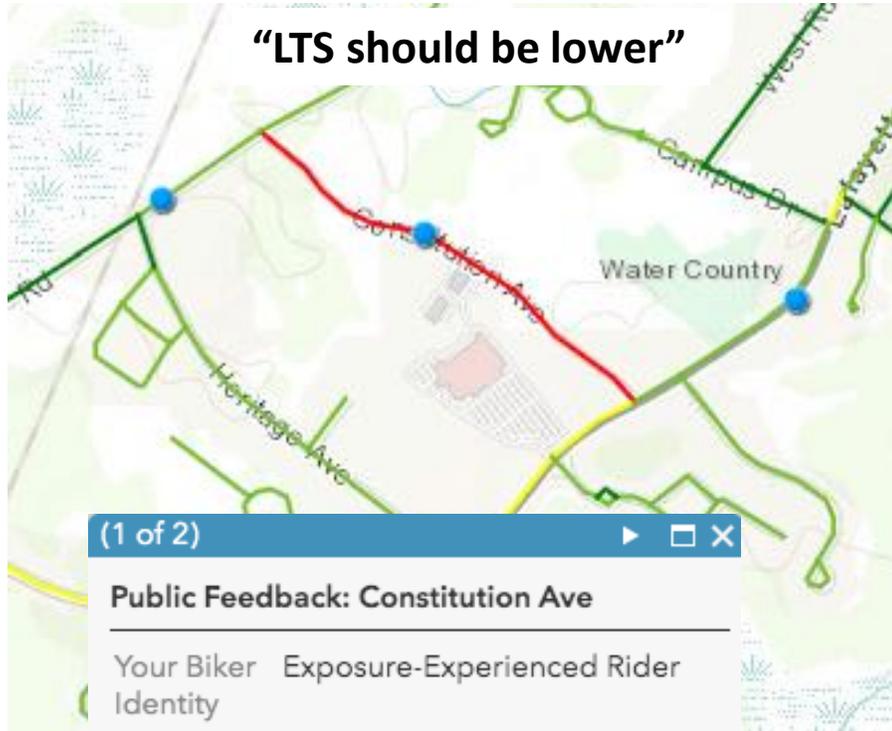

**To Add a Comment:**  
Use the + and - buttons to the right to zoom to your area of interest. After you have identified a road, click the blue dot below to add a comment.

Hover over the road, hold your "control" key to enable snapping, and click to place your point along a road.

Public Feedback Points  
Add a Comment

- Community PLTS QA/QC
- High frequency locations review
- Assess barriers and opportunities to connect new commercial and multi-family residential developments to transit

“LTS should be lower”

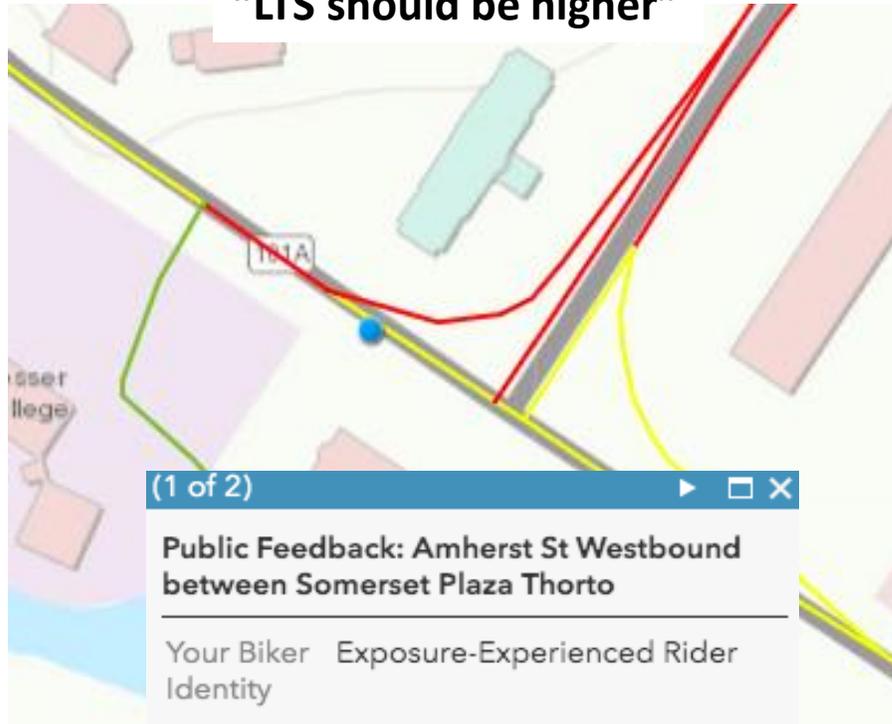

(1 of 2) [Navigation icons]

**Public Feedback: Constitution Ave**

Your Biker Identity	Exposure-Experienced Rider
Road Name	Constitution Ave
Your LTS Rating	2
Reason #1	Narrow Shoulder
Reason #2	Bad Road Condition
Reason #3	Low Traffic
Other Comments	Shoulder is narrow but rideable end-to-end. Road surface is fair. Debris in shoulder and sunken grates/manholes are a danger.

“LTS should be higher”

(1 of 2) [Navigation icons]

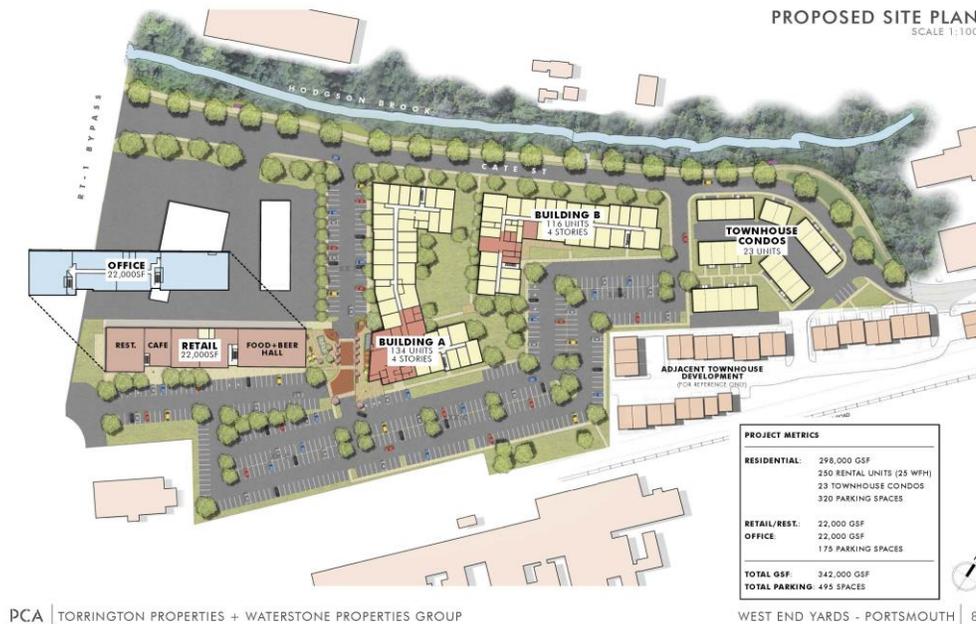

**Public Feedback: Amherst St Westbound between Somerset Plaza Thorto**

Your Biker Identity	Exposure-Experienced Rider
Road Name	Amherst St Westbound between Somerset Plaza Thorto
Your LTS Rating	4
Reason #1	High Traffic
Reason #2	Narrow Shoulder
Reason #3	
Other Comments	Right turn lanes, abrupt shrinkage of shoulder, disappearing car lane

# Sample Public Feedback

# TASK 4 – Model Site Plan Review Regulation Development

- Portsmouth & Dover as pilot communities
- Ordinance language addressing transit stop connection for new commercial and multi-family residential development

# Questions?

## Staffing

*Scott Bogle, RPC*

*Trisha Cheever, RPC*

*Mikayla Jerominek, RPC*

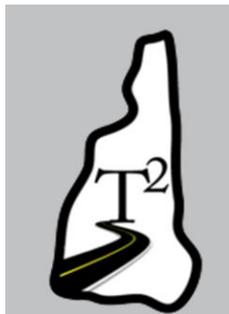

*Colin Lentz, SRPC*

*Jackson Rand, SRPC*

*Mark Davie, SRPC*

# Road Surface Management Survey (RSMS)

Transportation Advisory Committee Meeting  
8/24/23

# What role do your roads play?

## Commuting

To and from work, school, doctors, stores

## Services

Police, fire, ambulance, mail, trash

## Commerce/Shipping

Merchandise, natural resources, food

## Tourism

Beaches, mountains, skiing, events

## Recreational

Walking, cycling

# What is RSMS?

The practice of planning for pavement maintenance and rehabilitation with the goal of maximizing the value and life of a pavement network.

- A system to regularly collect roadway condition data
- A database to sort and store the collected data
- An analysis program to evaluate treatments and strategies at a network level

***In general...What do you have, What condition is it in,  
and What is the best way to maintain it?***

# Changes in Road Maintenance

**Changes to  
Traffic Volumes**

**Fluctuating  
Material Costs**

**Level or  
Decreased  
Budgets**

# Implementation

**Step 1:** Break designated Class V roads into 0.25-mile segments

**Step 2:** Condition Assessment

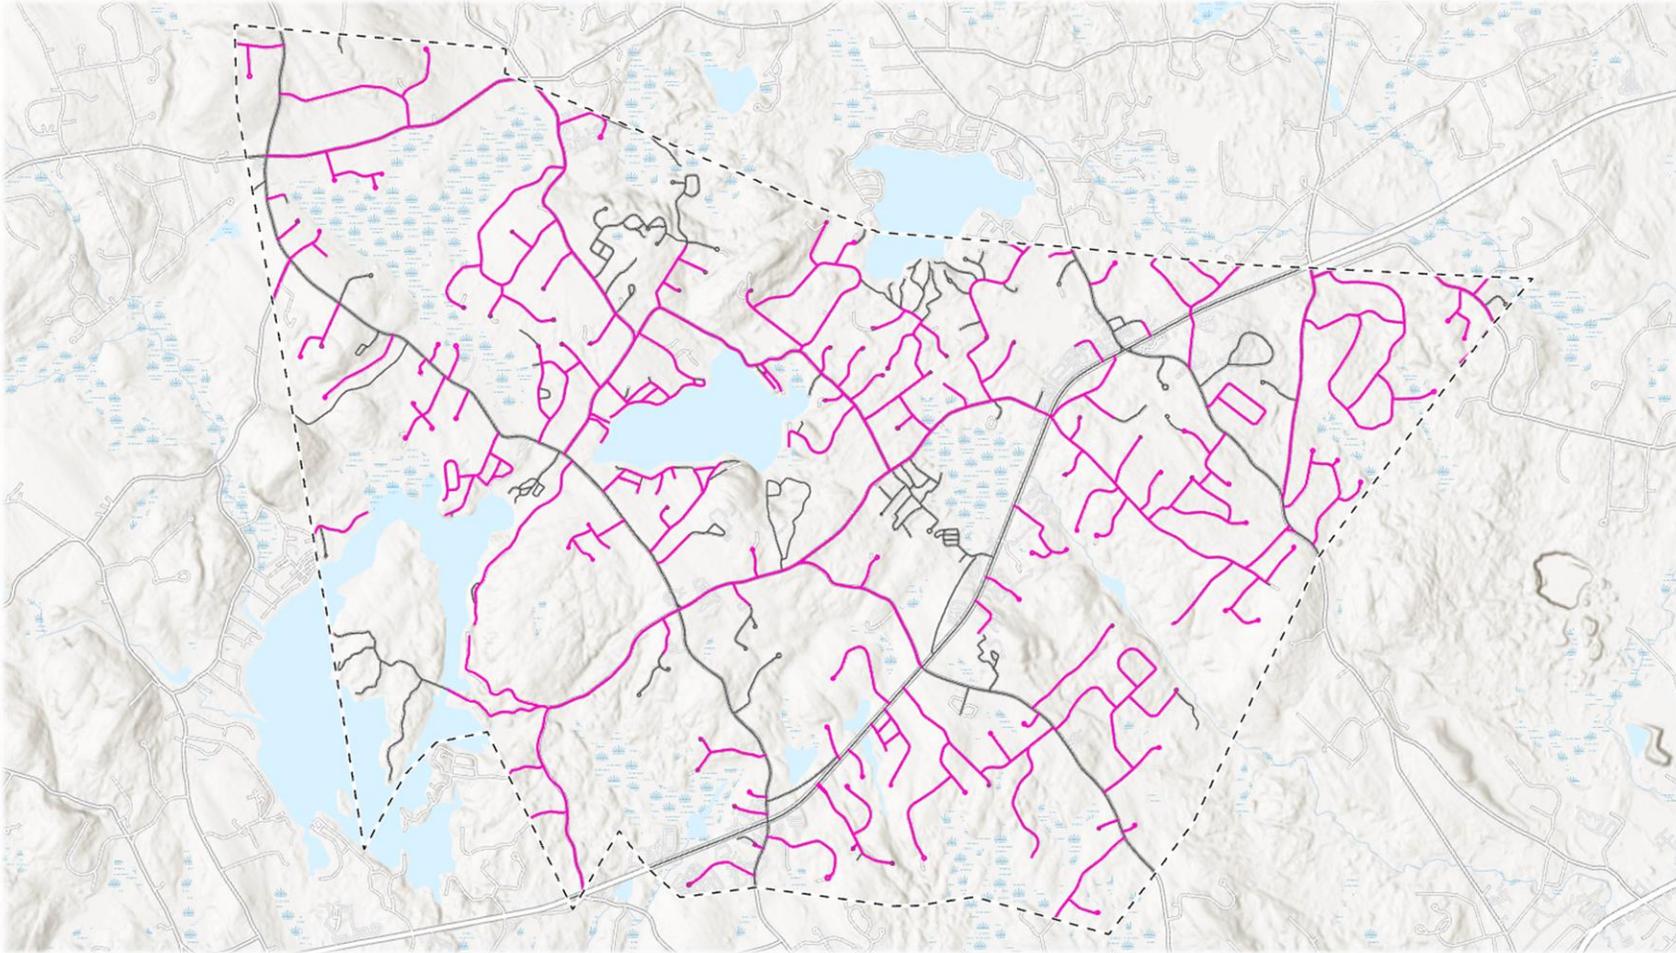

- Surface Condition Data
  - Wheel Path Rutting
  - Cracking Types & Severity
    - ~ Longitudinal
    - ~ Transverse
    - ~ Alligator
    - ~ Edge
  - Patching
  - Potholes
  - Drainage

**Step 3:** Calculate Pavement Condition Index (PCI) and Priority

**Step 4:** Generate Reports

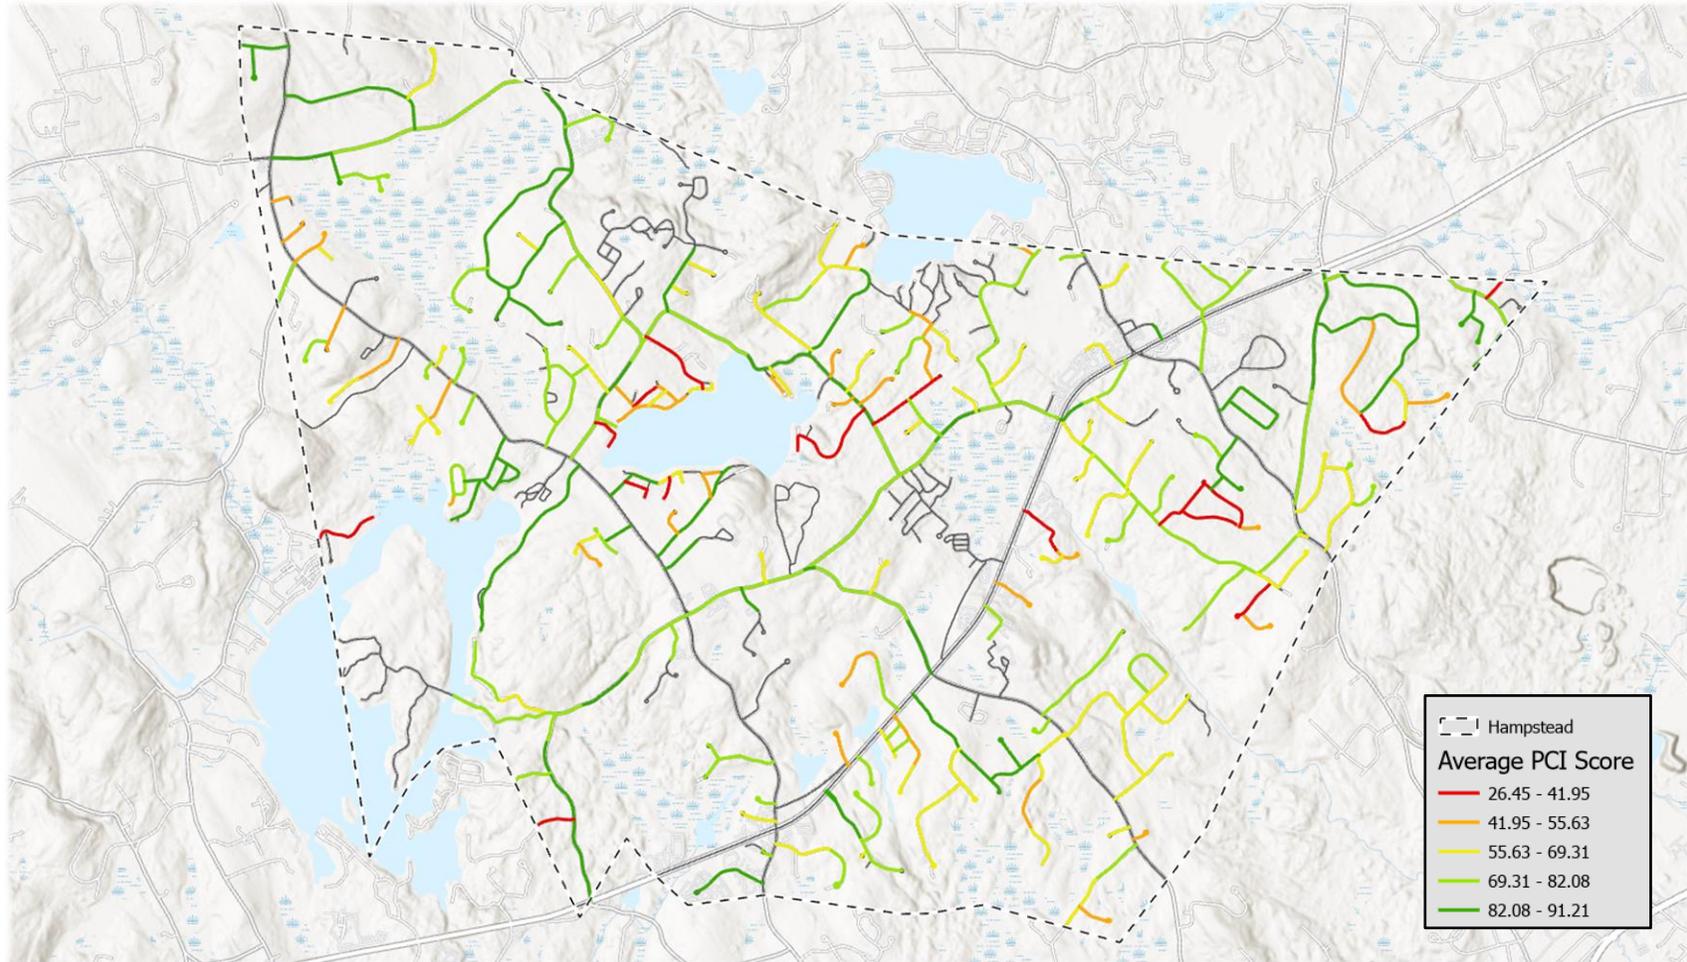

# Step 1:

Legislative Class V – Local Roads

# Step 2:

Network Average PCI: 70.48

# Step 3:

Priority	PCI	Street	SADES ID	SRI	Order	Length (ft)	Width (ft)	Lanes	Surface Type	Shoulder Type	Selected Repairs	Selected
